

## ABSTRACT

The present invention provides a foamed thermoplastic resin article having light weight and high stiffness suitable for interior members for automobile, as well as having soft feel of a skin layer, which is formed by integrally laminating a skin material and a thermoplastic resin foamed base material while forming the same, wherein the thermoplastic resin foamed base material is composed of a foamed core layer, a skin layer of the skin material side and a skin layer of the backside, and when thickness of the skin layer of the skin material side is defined as A, and thickness of the skin layer of the backside is defined as B, the A and B satisfy the relationship of  $A < B$ .
